About

This two day online course is aimed at providing you with a solid basis for image analysis. Course topics include: imaging pitfalls, image preprocessing, segmentation, feature extraction, image analysis automation (Fiji macro scripting) and more. Next to theoretical lectures, a large part of the course exists of applying learned skills.

Please note

- Costs for the workshop are 150 euro
- The course will be an online meeting, a good internet connection is recommended
- All course materials, including samples to work on are provided via surf filesender
