

PR007774	Oligoclonal IgG bands in cerebrospinal fluid (CSF) and serum	PAGE.1/1 VALID UNTIL : 01-01-2024
----------	---	--------------------------------------

How to send samples?

A centrifuged aliquot of both cerebrospinal fluid and serum (each minimal volume 1 ml) can be sent to our laboratory for analysis.

Note: The CSF and serum can be sent to our laboratory on room temperature. When the body fluids are stored for more than 24 hours, this should be done at 4 C.

It is advised to send the IgG concentrations in CSF / serum together with the samples; otherwise these concentrations will have to be determined by our laboratory.

Address for sending material:

Radboud University Medical Center
Radboudumc Diagnostic Laboratory
Route 815
Attn. TML, Neurochemistry, dr. MM. Verbeek
PO 9101
6500 HB NIJMEGEN
The Netherlands

Contact information :

phone: #-31-24-3614567

fax: #31-24-3668754

e-mail: marcel.verbeek@radboudumc.nl

Analysis frequency

Twice a week.

Turn-over time

Maximally 7 days.

Reference values

In normal CSF and serum, oligoclonal IgG bands are not present.

Analysis costs
